## PROFESSIONAL SUMMARY

---

Information Technology professional with 3+ years of experience spanning AI solutions, data engineering, enterprise architecture, IT processes, and platform operations. Experienced in developing AI-enabled automation, administering enterprise analytics platforms, troubleshooting data and AI systems, and translating ambiguous stakeholder needs into technical solutions using Python, SQL, cloud technologies, and enterprise AI platforms.

## PROFESSIONAL EXPERIENCE

---

### AI Analyst, Data & Semantics

August 2025 - Present

Stanley Black & Decker — Remote

- Partner with cross-functional teams to identify, scope, and solve business and IT problems using generative AI and agent-based automation, translating ambiguous requirements into practical technical solutions.
- Design and develop Copilot Studio agents and workflows using custom instructions, prompt engineering, knowledge sources, and multi-step automation to address business-specific processes.
- Develop and refine AI-enabled solutions through iterative testing, stakeholder feedback, and troubleshooting, evaluating outputs against business requirements and adjusting solutions to improve results.
- Administer and support enterprise deployment of Zenlytic, helping scale adoption from approximately 100 to nearly 2,000 users while managing access, troubleshooting issues, and coordinating data and platform support.
- Monitor Zenlytic usage, user activity, question trends, AI model performance, and response behavior; investigate whether issues originate in the platform, underlying data, semantic models, or AI-generated responses.
- Partner directly with the Zenlytic team to evaluate new features, provide product feedback, test releases, and deliver demonstrations to internal stakeholders.
- Develop and maintain semantic models that translate business requirements and underlying data into governed, accessible sources for AI-powered analysis.
- Develop Python-based integrations using APIs to automate administrative tasks and extend enterprise platform capabilities beyond native functionality.
- Lead hands-on AI enablement with cross-functional teams through discovery sessions, workshops, and hackathons, demonstrating solutions and teaching stakeholders to independently develop and adapt AI applications.
- Lead and coordinate an AI-focused hackathon for IT stakeholders, helping teams identify practical generative AI use cases and develop hands-on experience with emerging AI tools.

### Stanley Leadership Program - Information Technology

July 2023 - August 2025

Stanley Black & Decker — Remote

- Two-year rotational leadership program spanning four six-month IT rotations.

### GenAI App Architecture

January 2025 - August 2025

- Collaborated with business and data teams to integrate enterprise data into Zenlytic, define requirements, develop semantic models, and enable AI-powered data analysis.
- Built and maintained semantic models using business requirements, metadata, and SQL-based definitions to organize enterprise data for natural-language analysis.
- Conducted user feedback sessions and iterative testing of Zenlytic and the company's internal AI chatbot to identify issues and improve AI functionality and user experience.
- Supported adoption of AI solutions across business functions through stakeholder demonstrations, testing, troubleshooting, and ongoing guidance.

### Data Architecture, Platform Engineering

July 2024 - January 2025

- Developed SQL-based Snowflake usage reporting and Power BI dashboards monitoring query volume, warehouse utilization, and credit consumption, providing leadership with visibility into platform usage and cost drivers.
- Automated data collection and reporting processes using SQL, Python, Power BI, and Power Query, reducing recurring data-collection effort by approximately 40 hours per month.
- Used an existing AWS Lambda-based audit process to identify WorkSpaces inactive for more than 90 days, coordinated with users to validate continued need, and removed unused resources, contributing to approximately \$20,000 in annual savings.
- Analyzed AWS Secrets Manager role permissions to support access reviews and IT audit activities.

Architecture Process Engineer, Enterprise Architecture

January 2024 - July 2024

- Took over development of a Python-based generative AI automation that retrieved 40,000 product-manual PDFs from Box, extracted metadata using OpenAI, structured results in Excel, and uploaded documentation and metadata to Bynder, saving approximately 650 productivity hours.
- Developed a Python/OpenAI solution to enrich 2,500 application records with descriptions, vendor names, and vendor URLs, increasing application-data completion from 30% to 63%.
- Partnered with IT stakeholders to establish data-quality and certification processes, including training, communications, surveys, and process mapping.
- Documented current-state enterprise architecture using Ardoq and developed Excel and Power BI reporting to monitor data quality and certification progress.

Process Analyst, IT Process

July 2023 - January 2024

- Analyzed historical project lessons-learned and project change-reason data using Excel and the company’s emerging AI chatbot to identify recurring themes, quantify feedback, and uncover opportunities for process improvement.
- Developed Excel-based analyses, formulas, and visualizations to transform qualitative project feedback and operational data into quantitative insights and presented findings to project management stakeholders.
- Established a repeatable process for analyzing lessons-learned data and reporting trends, enabling the organization to regularly leverage historical project information to identify improvement opportunities.

EDUCATION

University of Maryland — College Park, MD

May 2023

Bachelor of Science in Information Science

TECHNICAL SKILLS

|                              |                                                                                   |
|------------------------------|-----------------------------------------------------------------------------------|
| Programming                  | Python, SQL, PowerShell, Java, R, HTML/CSS, JavaScript, VBA, MATLAB               |
| AI & Automation              | Generative AI, Microsoft Copilot Studio, Prompt Engineering, Power Automate, APIs |
| Cloud & Data                 | AWS, Snowflake, dbt Cloud, Power BI, Power Query                                  |
| Enterprise Platforms & Tools | Zenlytic, Excel, Microsoft Office, SharePoint, Jira, Ardoq, Google Suite          |
| Development Environments     | Git, VS Code, MySQL, RStudio, Jupyter Notebooks                                   |
